

Computational thinking, problem-solving and programming: General Principals

IB Computer Science

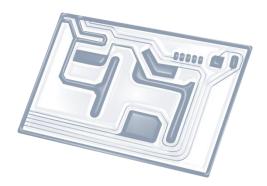

Content developed by **Dartford Grammar School** Computer Science Department

HL Topics 1-7, D1-4

1: System design

2: Computer Organisation

3: Networks

4: Computational thinking

5: Abstract data structures

6: Resource management

7: Control

D: OOP

HL & SL 4.1 Overview

Thinking procedurally

4.1.1 Identify the procedure appropriate to solving a problem

- 4.1.2 Evaluate whether the order in which activities are undertaken will result in the required outcome
- 4.1.3 Explain the role of sub-procedures in solving a problem

Thinking logically

- 4.1.4 Identify when decision-making is required in a specified situation
- 4.1.5 Identify the decisions required for the solution to a specified problem
- 4.1.6 Identify the condition associated with a given decision in a specified problem
- 4.1.7 Explain the relationship between the decisions and conditions of a system
- 4.1.8 Deduce logical rules for real-world situations

Thinking ahead

- 4.1.9 Identify the inputs and outputs required in a solution
- 4.1.10 Identify pre-planning in a suggested problem and solution
- 4.1.11 Explain the need for pre-conditions when executing an algorithm
- 4.1.12 Outline the pre- and post-conditions to a specified problem
- 4.1.13 Identify exceptions that need to be considered in a specified problem solution

Thinking concurrently

- 4.1.14 Identify the parts of a solution that could be implemented concurrently
- 4.1.15 Describe how concurrent processing can be used to solve a problem
- 4.1.16 Evaluate the decision to use concurrent processing in solving a problem

Thinking abstractly

4.1.17 Identify examples of abstraction

4.1.18 Explain why abstraction is required in the derivation of computational solutions for a specified situation

- 4.1.19 Construct an abstraction from a specified situation
- 4.1.20 Distinguish between a real-world entity and its abstraction

1: System design

2: Computer Organisation

4: Computational thinking

5: Abstract data structures

6: Resource management

D: OOP

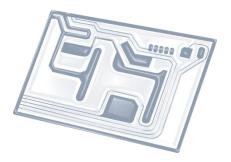

7: Control

Topic 4.1.20

Distinguish between a **real-world entity** and its **abstraction**

Real vs abstract: it's all about the details
