

Abstract Data Structures

IB Computer Science

HL Topics 1-7, D1-4

1: System design

2: Computer Organisation

3: Networks

4: Computational thinking

5: Abstract data structures

6: Resource management

7: Control

D: OOP

Thinking recursively

- 5.1.1 Identify a situation that requires the use of recursive thinking
- 5.1.2 Identify recursive thinking in a specified problem solution
- 5.1.3 Trace a recursive algorithm to express a solution to a problem

Abstract data structures

- 5.1.4 Describe the characteristics of a two-dimensional array
- 5.1.5 Construct algorithms using two-dimensional arrays
- 5.1.6 Describe the characteristics and applications of a stack
- 5.1.7 Construct algorithms using the access methods of a stack
- 5.1.8 Describe the characteristics and applications of a queue
- 5.1.9 Construct algorithms using the access methods of a queue
- 5.1.10 Explain the use of arrays as static stacks and queues

Linked lists

- 5.1.11 Describe the features and characteristics of a dynamic data structure
- 5.1.12 Describe how linked lists operate logically
- 5.1.13 Sketch linked lists (single, double and circular)

Trees

- 5.1.14 Describe how trees operate logically (both binary and non-binary)
- 5.1.15 Define the terms: parent, left-child, right-child, subtree, root and leaf
- 5.1.16 State the result of inorder, postorder and preorder tree traversal
- 5.1.17 Sketch binary trees

Applications

- 5.1.18 Define the term dynamic data structure
- 5.1.19 Compare the use of static and dynamic data structures
- 5.1.20 Suggest a suitable structure for a given situation

2: Computer Organisation

3: Networks

4: Computational thinking

5: Abstract data structures

6: Resource management

D: OOP

Topic 5.1.10

Explain the use of **arrays** as **static stacks** and **arrays**

Using Arrays for Stacks/Queues

- Arrays are **static** data structures (can't change size)
- Stacks & queues are dynamic data structures (can change size)
- You can use an array to behave like a stack or a queue, provided you give it enough elements to allow the stack or queue to function.

Useful explanation

See this explanation about how arrays can be used for stacks (and all the problems that brings with it!)

https://www.cs.bu.edu/teaching/c/stack/array/

From the IBO:

"Students should be able to explain push and pop operations, and test for an empty/full stack"

AND

"Students should be able to explain enqueue and dequeue operations, and test on empty/full queue"
