

Abstract Data Structures

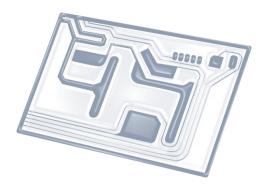

IB Computer Science

HL Topics 1-7, D1-4

1: System design

2: Computer Organisation

3: Networks

4: Computational thinking

5: Abstract data structures

6: Resource management

7: Control

D: OOP

Thinking recursively

- 5.1.1 Identify a situation that requires the use of recursive thinking
- 5.1.2 Identify recursive thinking in a specified problem solution
- 5.1.3 Trace a recursive algorithm to express a solution to a problem

Abstract data structures

- 5.1.4 Describe the characteristics of a two-dimensional array
- 5.1.5 Construct algorithms using two-dimensional arrays
- 5.1.6 Describe the characteristics and applications of a stack
- 5.1.7 Construct algorithms using the access methods of a stack
- 5.1.8 Describe the characteristics and applications of a queue
- 5.1.9 Construct algorithms using the access methods of a queue
- 5.1.10 Explain the use of arrays as static stacks and queues

Linked lists

- 5.1.11 Describe the features and characteristics of a dynamic data structure
- 5.1.12 Describe how linked lists operate logically
- 5.1.13 Sketch linked lists (single, double and circular)

Trees

- 5.1.14 Describe how trees operate logically (both binary and non-binary)
- 5.1.15 Define the terms: parent, left-child, right-child, subtree, root and leaf
- 5.1.16 State the result of inorder, postorder and preorder tree traversal
- 5.1.17 Sketch binary trees

Applications

- 5.1.18 Define the term dynamic data structure
- 5.1.19 Compare the use of static and dynamic data structures
- 5.1.20 Suggest a suitable structure for a given situation

2: Computer Organisation

3: Networks

4: Computational thinking

5: Abstract data structures

6: Resource management

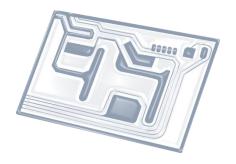

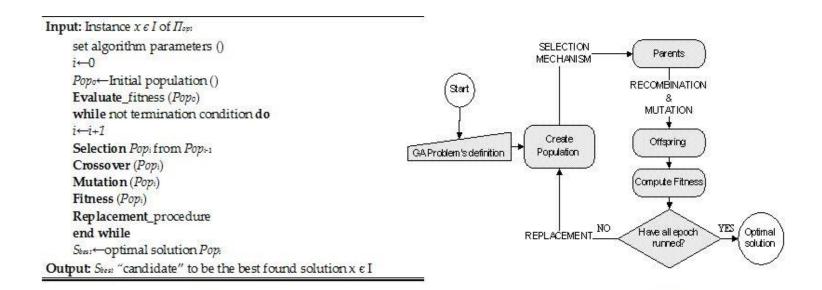

Topic 5.1.7

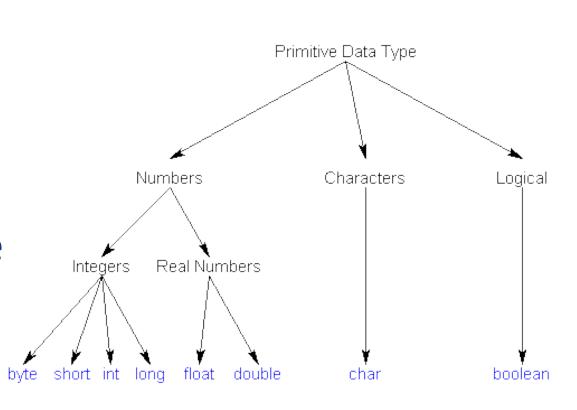

Construct algorithms using the access methods of a stack

Abstract Data Structures (ADTs)

- 2D array
- Stack
- Queue
- Linked List
- (Binary) Tree

Computer Science First Exams 2014

Pseudocode in Examinations

Standard Data Structures
Examples of Pseudocode

lates are NOT allowed a copy of this document during their examinations

3 Stack Methods

Stacks

A stack stores a set of elements in a particular order: Items are retrieved in the which they are inserted (Last-in, First-out). The elements may be of any type (Manuero, especie, arrays, Strings, etc.).

Method name	Brief description	Example: OPS, a stack of integers	Comment
push()	Push an item onto the stack	OPS.push(42)	Adds an element that contains the argument, whether it is a value, String, object, etc. to the top of the stack.
pop()	Pop an item off the stack	NUM = OPS.pop()	Removes and returns the item on the top of the stack.
isEmpty()	Test: stack contains no elements	if OPS.isEmpty() then	Returns TRUE if the stack does not contain any elements.

Example 1: Move from array to stack

Write an algorithm that will move all the elements from a linear integer array LINE to a stack called S.

int COUNTER = 0
loop COUNTER from 0 to LINE.length
 S.push(LINE[COUNTER])
end loop

Example 2: Print out a stack

Write an algorithm that will print all the String values of a stack called S.

loop while not S.isEmpty() output(S.pop()) end loop
